RoomAlert

Watching over your interests

Maintaining a stable room environment is essential, particularly for companies that are heavily dependant on IT.

RoomAlert is the most cost effective way to monitor critical environment conditions. RoomAlert runs from any standard Windows NT/2000/XP workstation or Server.

When a pre-defined threshold is reached, RoomAlert ensures that support staff and support personnel are notified immediately, reducing the potential for a major business catastrophe.

Alerting features include e-mail, pager, mobile phone (SMS), PDA, console broadcast and internet. Notification can be made to individuals, groups and hierarchies with alert escalation to an unlimited number of contacts. RoomAlert allows staff to remain in control even when they are away from the office or off-site. By using the Remote Web Browser function authorised users can gain access to RoomAlert via the internet and see if and when problems have occurred, who has been notified, what the monitored conditions are and more, from any web enabled system.

RoomAlert provides a completely automatic, easy to use and reliable solution to the remote monitoring of critical IT and business environments - 24 hours a day, 365 days a year.

RoomAlert includes a built-in digital temperature and humidity sensor, flood sensor and power sensor. Three additional sensor channels are available which allows you to add any of the following sensors:

- Additional **temperature** sensor
- Additional **humidity** sensor
- Additional **power** sensor
- Flood** extender (connects to built-in flood sensor)
- Smoke** sensor
- Intruder** sensor
- Dry Contact** switch*

* The additional sensor channels support most two-wire, on/off, or open/closed type sensors

Product Includes

- RoomAlert hardware
- Flood Extender
- Host Alerting Software

Optional

- Network interface

watching over your interests...

Features

- Sends e-mail notification with escalation
- Sends SMS notification with escalation to Pagers/Mobiles/PDAs*
- Broadcasts alerts via console messages
- Includes Nightwatch Host Alerting Software**
- Built-in digital temperature sensor
- Built-in digital humidity sensor
- Built-in power sensor
- Built-in flood sensor
- Supports additional sensors
- Host software runs from any NT/2000/XP PC/Workstation
- Remote web browser Interface
- Wall mountable

Specifications

Ports	Sensor(x4), RS-232(1), Daisy Chain(1)
Power	12V DC 500ma
Certification	FCC B, CE Mark
Dimensions	7.25" x 3.5" x 2.25"
Weight	40 oz.
Mounting	Wall

* All UK pager and mobile phone services are supported including Vodafone, BT Cellnet, Orange, One-2-One etc.

** For environment monitoring purposes only, an additional Nightwatch licence is required if server and application monitoring is required.
